DIVISION 7

MAR 25 1957

U.S. PATENT OFFICE

- You can simultaneously examine six 35mm double frames, four pairs of stereo frames, 12 single frames, etc.
- Large magnifying lens glides freely across the entire viewing area for careful study of details in any particular frame.
- Lighting system built into a sturdy metal housing consists of a tubular 25 watt internal reflector and an "opal" glass viewing surface.

Adjustable legs permit viewing in either a horizontal or sloped position.
